

## 12.- ART & CRAFT

Hello! I am Luis. I teach Art and craft in secondary education. As you can see, we are in a practical class. The goal of this subject is that students get to express themselves and communicate through different artistic techniques.

At the moment, some of the students are working on plane geometry, while others are doing modules on triangular or square networks.....To do this we use different materials, from the usual triangles and setsquares, to more artistic materials such as paintbrushes, watercolours, acrylic...

The working method consists firstly of a practical explanation on the board for all the students. Later, each of them works on the topic, though they may use different materials.

Here we have an example in which a picture is completed using different techniques such as pencil, colouring pencil, collage, tempera or watercolours.

Further examples of what we do in this subject, specifically in fourth year, are the representation systems. This student has done some work on dihedrals, another on isometric perspective and on spatial perspectives.

Apart from school hours, we have external visits to museums, exhibitions, etc...We even collaborate with some organizations that come to show us very special techniques for engraving, clay, sculpture, etc.

### FEMALE AND MALE PUPIL: MATERIAL NEEDED FOR CLASS

When we come to this class, we need to bring with us a ruler, a setsquare, a triangle, and a compass with which we can draw straight and parallel lines. We also draw names and family names in spatial perspective, and then we paint them using coloured paints before converting them into graphs.
